

CLEANING DENTURES WITH TEMPORARY LINING

1. Use Kleenite as a soaking cleanser.

Follow directions on the package for mixing cleanser, except use **warm, almost cool water – NOT HOT.**

Do not experiment with other cleansers as they may damage the lining.

2. Soak denture in this solution up to thirty (30) minutes daily. Do **NOT** leave in cleaner solution overnight.
3. Use cotton balls to swab liner during the first several days. After this, the surface of the lining can be lightly brushed with a soft toothbrush.
4. **Avoid hot food** and **food requiring heavy chewing** for the first day. Warm food and light chewing will not harm the lining.
5. Avoid food with seeds, as they can become embedded in the lining.
6. Keep denture in water when it is out of your mouth for any period of time. It should not become dry.
